NagarSetu

A Bilingual AI-Powered System for Smart Civic Complaint Management and RTI Assistance

Group 01 | Prachiti Parab . Sneha Gupta . Aafreen Khan . Tulsi Dubey
Guide: Dr Rahul Ambekar

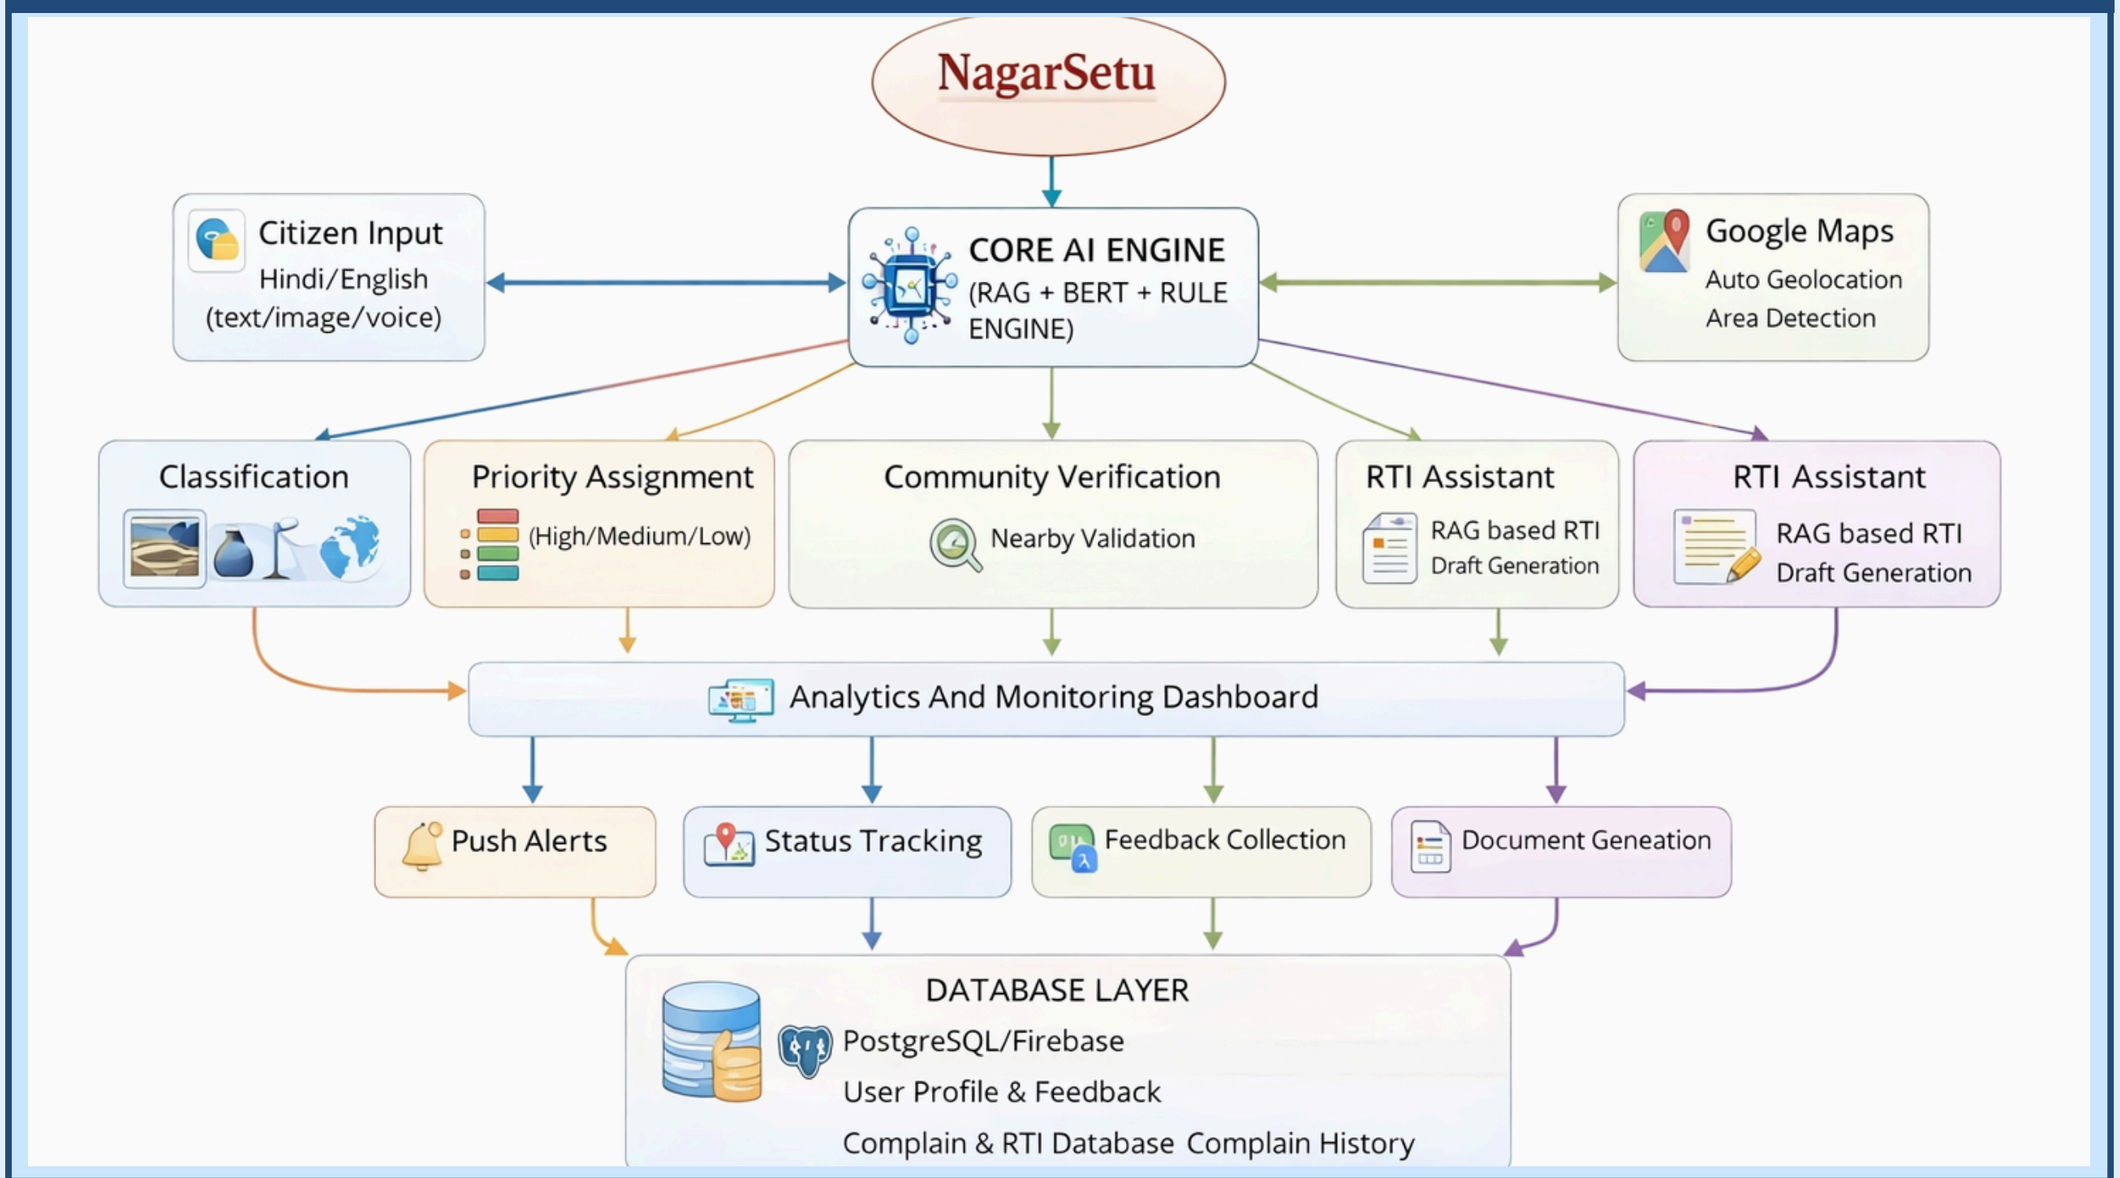
Abstract

- NagarSetu is a bilingual AI-powered platform for civic complaint reporting and RTI assistance.
- Citizens can submit complaints using text, image, or voice inputs in Hindi or English.
- MobileNet and BERT/DistilBERT automatically classify image and text complaints.
- Whisper converts voice inputs into text for processing.
- A RAG module generates structured RTI drafts using RTI Act knowledge.

Problem Statement and Analytical Study

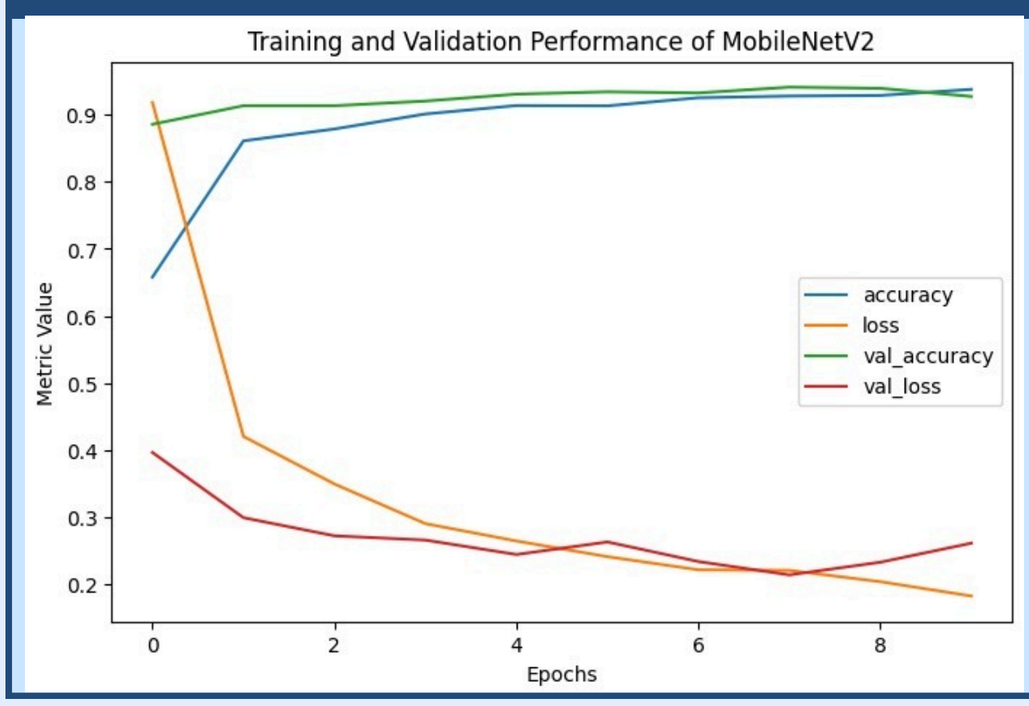
- Urban areas face increasing civic complaints related to infrastructure and public services.
- Existing systems rely on manual classification and English-only text complaints, causing delays and limited accessibility.
- AI techniques such as CNN and NLP can improve automated complaint analysis.
- However, most solutions lack multimodal inputs and RTI assistance.
- This motivates a bilingual AI-based platform for automated complaint management and RTI support.

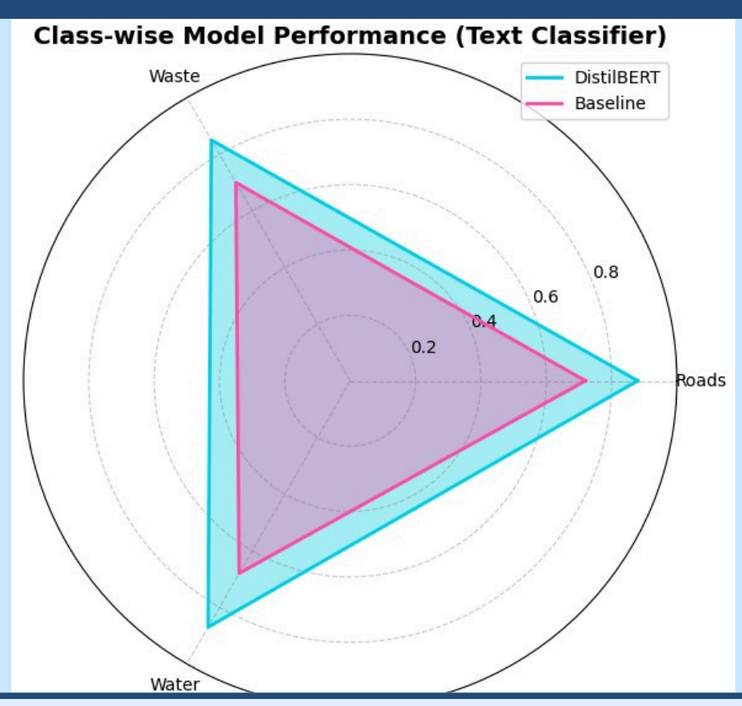
System Architecture

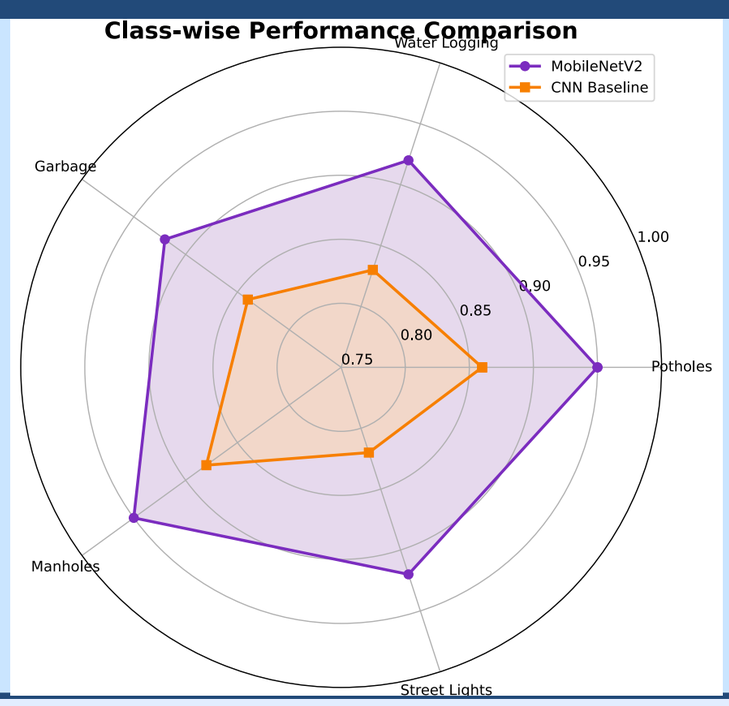


SDG Goals

Model Results







Conclusion

- NagarSetu is a bilingual AI-powered system for automated civic complaint management and RTI assistance.
- It integrates computer vision, NLP, and speech recognition to process multimodal complaints.
- The system improves complaint routing efficiency, transparency, and citizen engagement in smart governance.

Future Scope & References

Future Enhancements:

- Extend multilingual support to additional Indian languages.
- Integrate with official municipal and RTI portals for real-time complaint tracking.
- Develop a mobile application and AI chatbot for improved citizen interaction.
